

Significant diversity impact

Diversifying the proportion of tree species by increasing the share of broad-leaved trees and a number of rarer tree species.

Ensuring sufficient dead wood resources for forest species. Increasing the amount and diversity of standing and lying dead wood.

Safeguarding valuable habitats in forest management and promoting voluntary conservation.

Identifying herb-rich forests and sun-lit habitats in commercial forests and increasing their biodiversity values with management.

Increasing fire habitats by implementing controlled burning and nature management-related burning.
